

Getting Started:

What R and the Tidyverse can do for you

Monday 7th March | 2.30pm - 3.30pm

Online - Zoom

R is becoming a standard method for analysing data yet at first R can be overwhelming and may seem like a foreign language.

In this workshop, you will be introduced to the coding language R, the software RStudio, and a tool called the tidyverse. You will learn how to import, manipulate and analyse a dataset using practical examples.

Mercedes is a PhD student studying how land management practices like grazing livestock influence post-fire soil chemistry and microbiology.
